**Supplementary Figure 2**: The flicker electroretinograms (ERGs) before and after the cataract surgery. (A) Plot of the amplitude of reconstructed waveform of the flicker ERGs before and at each time point after the cataract surgery. The bars indicate the standard error of the mean (SEM). *P < 0.05, **P < 0.001. (B) Changes in the implicit times of the reconstructed waveform of the flicker ERGs before and at each time point after the cataract surgery. The bars indicate the standard error of the mean (SEM). **P < 0.001
